(57) Abstract:

PROBLEM TO BE SOLVED: To provide a powder cosmetic having a smooth and extensible use touch, giving good finished appearances not generating a twist without sinking into skin wrinkles and textures, and having excellent makeup effect persistence.

SOLUTION: This powder cosmetic contains the following components (a) and (b). (a) A cosmetic

powder whose surface is treated with one or more compounds which has a perfluoropolyether group having a mol.wt. of ≈ 300 and is selected from a perfluoropolyetheralkyl phosphate and/or its salt, a perfluoropolyetheralkyl sulfate ester and/or its salt, and a perfluoropolyetheralkylcarboxylic acid and/or its salt. (b) An amphipathic silicone compound containing a hydrophilic segment and an organic polysiloxane segment in the molecule.
